"Latest Tweets" is a sleek module that fetches your Twitter statuses on your Joomla! website, the easy way.

Just set the simple parameters and publish the module. You can even copy the module to multiple instances and fetch the latest tweets from different users on your website (e.g. in a multi-author environment).

The module is released under the GNU/GPL v2 license.

You can see a demo of the module **on the left column of the frontpage of this demo site.**
